**Soilmeability** is an android mobile and desktop application that computes soil permeability problems in Geotechnical Engineering subject and helps on the application of soil test laboratory tests.

**Soilmeability** mobile application was programmed by using java programming language to provide users the compilation of discussions which caters soil permeability formulas and concepts, to make the learning process easier.

**Soilmeability** mobile application has an ability to print soil test results in legal,  letter, A4 sizes and etc. through wifi printer.

Also, it has a programmed calculator that lessens the time in calculating problems about the soil permeability. This application was packed with formula calculators which can calculate problems in a two way process.
